Meet Our Grads

Bryce Outten is a doctoral mechanical engineering student through FAMU and is a researcher at the Florida Center for Advanced Aero-Propulsion (FCAAP) at the FAMU-FSU College of Engineering. When Outten arrived at the college it was 2020, during the height of the pandemic. He like many students found the experience challenging.

“I’m an extrovert and thrive when I am physically around people, so my first experience as a grad student in engineering was difficult for me,” Outten said. “Not being able to study with other students, interact or go out to social events set me back at first. Now that things are getting back to normal, having the HBCU culture and the culture of a larger institution has been the best of both worlds, as far as resources and cultural atmosphere.”
