Undergraduate Minor in Environmental Engineering Science Curriculum

Requirements for a Minor in Environmental Engineering Sciences

"A minor in environmental engineering science requires a minimum of twelve (12) semester hours of course work in environmental engineering."

The twelve (12) semester hours of course work in environmental engineering which includes EES 3040 and ENV 4001 plus six (6) additional hours in courses with prefixes EES or ENV at the 3000 level or above, with no more than one (1) of the following courses counting toward the minor: ENV 4340 or ENV 4611.

To apply to minor in Environmental Engineering Science, students must:

- Consult with Undergraduate Coordinator and obtain approval
- Satisfy stated prerequisites before enrolling in any environmental engineering course.

Grades of "C" or better must be earned in each course accepted for minor credit. If an environmental engineering science minor is combined with a civil engineering major, EES 3040 and one other course, up to six (6) credits total, may count toward both the major and the minor.

I have read and agree to abide by the CEE Minor in Environmental Engineering Science policy outlined above.
